

AUTHOR BIO

FATEH UDDIN B. MEHMOOD

Fateh uddin B. Mehmood is a governance practitioner and the author of *Ungoverned Intelligence*, a leadership book on governing data, AI systems, and autonomous agents before weak governance becomes institutional failure.

His work sits at the intersection of data governance, AI governance, digital government, machine-readable governance, institutional accountability, and public-sector transformation. He focuses on the institutional foundations that determine whether digital systems can be trusted: ownership, source authority, permissions, records, controls, evidence, auditability, and leadership accountability.

Ungoverned Intelligence turns that practical governance problem into a leadership architecture for boards, executives, regulators, public-sector leaders, risk teams, audit leaders, and AI governance professionals.

AREAS OF WORK

- Data governance and trusted data foundations
- AI governance and executive accountability
- Digital government and institutional transformation
- Machine-readable governance and control evidence
